

START WITH A BOT.

**“What's holding back growth — traffic clarity, or demand?
We get visitors. Nothing happens. I don't know why.
I spend more time managing tools than running my business.
Everyone's talking about AI. I don't know where to start.”**

Not another bot you half-train, get bad answers from, and keep subsidizing with effort. *If a mere tool did it, you'd already have solved it by now.* **Authava** puts a managed bot on your site, built on layered knowledge, pre-processed data, and live API calls to your real systems when the answer needs to be exact. Pre-chat & post-chat hooks feed into your workflow. A feedback processor analyzes every conversation. A weekly growth report tells you what it's finding. Most bots are islands. Ours is part of your team.

WHAT IT DOES

- › Answers visitors with accuracy, around the clock
- › Captures leads from people who will never fill out a form
- › Connects to your live systems mid-conversation — prices, inventory, account details returned exactly, not guessed
- › Gives signals each week on where growth is stuck — traffic, messaging, or the offer
- › Fully integrated — everything available via API, with hooks before, during, and after every conversation
- › Acts as a website audit — A visitor asked about returns. The bot surfaced an outdated policy on page 327. Real legal exposure. Fixed that afternoon

WHY AUTHAVA

Built to FinTech standards — where a wrong answer isn't embarrassing, it's a liability. That discipline carries into every bot we build, for every industry.

- › Managed — we build it, train it, tune it, help maintain it
- › Start simple, grow without rebuilding. You don't outgrow Authava.
- › Weekly growth report — plain English, tells you what's blocking growth
- › Designed, built, and operated in the United States
- › First bot live in about a week

THIS WORKS BEST WHEN

- › You need something live within 60 days
- › You need a great conversation layer
- › You believe you go further with the right partners than building everything yourself
- › You have a big vision but need a practical place to start without being boxed in later

We craft customer-facing bots so your business can share its value with the people it serves.
